 Document 3: Photoshop 6.0 Technical Bible, Softbank Publishing Inc., First edition, 25 January 2001, pp. 67-68

**Discussion**

Document 1 pertains to a digital print ordering system that uses a network such as the Internet, etc., and says a user uses image processing and ordering software, and image data, after having image processing such as gamma correction applied, is sent to a printer (paragraphs 0044-0045). It also suggests adding image correction processing instruction data as print order data and having image correction processing done by an operator at the printer (paragraph 0062).

A technical means that displays image data, having it contrasted with image data before image processing and the details of a plurality of various corrections, respectively, as contrastive thumbnails and performs the corresponding image processing on the relevant image data according to which thumbnail is selected by a user is well-known user interface art, as described in document 2 and document 3. Employing this as a user interface for entering image correction processing instruction data added to print order data in the system described in document 1 could easily be conceived by a person skilled in the art.

Therefore the inventions of claims 1-18 do not involve an inventive step on account of documents 1-3.
